

# LOAD LINE CONTAINMENT

When the connection between the load line and the truck hose is broken, spills are contained inside the PCC Load Line Container. The load line containers can be placed inside or outside the containment walls. PCC Load Line Containers can be equipped with a Sidewinder Assembly. The Sidewinder automatically empties the container while the truck is loading. The containers are manufactured with a UV resistant and non-corrosive polyethylene for maximum durability. They are designed for crude oil and saltwater service. Containers are available in 3 colors - yellow, black and tan.

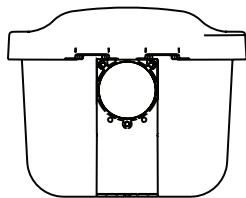

- Steel collar and saddle gives the 300, 301 and the 302 the strength of steel and the non corrosiveness of polyethylene.
- Ribs have been added to the back of the units to double the strength of the steel saddle.
- Taller lids available on the 302 and 303 to accommodate gate valves.

## PPC 300

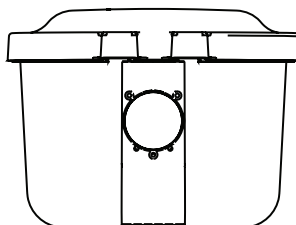

- 3 Gallons
- 2"-4" Collars
- Weight: 20 lbs

## PPC 301

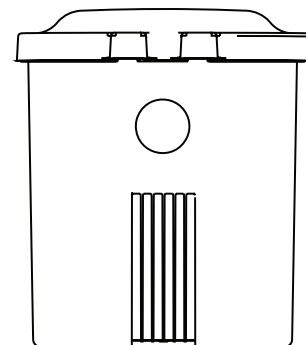

- 6 Gallons
- 2"-4" Collars
- Weight: 25 lbs

## PPC 302

- 9 Gallons
- 2"-4" Collars
- Weight: 35 lbs

## PPC 303

- 29 Gallons
- 4.75" Collar
- Weight: 31 lbs
